The following code will be in production on April 11, 2002.

PERFORMANCE IMPROVEMENT TO EFT PAYMENT AMOUNT INQUIRY SCREEN (S47J)

Performance improvements have been made to this screen so that the response time is substantially reduced.

In the past, if a record was selected on the S47J screen and the F6 key was activated, the response time was slow. Also, when the Vendor Transaction Inquiry screen (S085) was displayed, it showed batch agency in the agency field.

The code has been modified to improve the performance of the S47J screen and to populate the S085 screen "agency field" with the value of the financial agency.
